

	<u>Host your own?</u>	<u>Use a CDN?</u>
Why?	<p>Complete control</p> <p>Run internally with no internet</p>	<p>There are a bunch of people who will serve files you need for free.</p> <p>Examples:</p> <p>https://code.angularjs.org/</p> <p>https://cdnjs.com/</p> <p>The files might already be in the user's cache from visiting another site.</p>
Why Not?	<p>You pay for the bandwidth.</p> <p>Will never be pre-cached from another site, so users pay by waiting.</p>	<p>More HTTP requests / roundtrips</p>
Opinion	<p>Probably the best choice for internal apps</p>	<p>Probably the best choice for external apps</p>
